

Andrusiak, Matthew		
Liquid phase separation and aggregation of the intrinsic inhibitor of axon regeneration TIAR-2		50
Babinchak, W. Michael		
Role of liquid phase separation of the TDP-43 amyloidogenic low complexity domain in neurodegeneration-associated amyloid aggregation		51
Bächler, Mirjam		
Cytoplasmic freezing - cytoplasmic solidification upon extended carbon starvation in fission yeast		52
Barducci, Alessandro		
Combining advanced simulation methods and coarse-grained modeling to investigate protein phase separation		53
Berchtold, Doris		
An image-based systems-level study on regulators of multiple membrane-less organelles in human cells		54
Bishop, Isaac		
RNA-binding proteins with mixed charge domains self-assemble and aggregate in Alzheimer's disease		55
Boehning, Marc	Presenter: Boehning, Marc; Rankovic, Marija	
RNA polymerase II clustering through CTD phase separation		56
Boeynaems, Steven		
RNA tunes material properties of protein phase separation		57
Broedersz, Chase P	Presenter: Walliser, Nils-Ole	
Looping and Clustering: a statistical physics approach to protein-DNA complexes in bacteria		58
Caballero-Mancebo, Silvia		
Actin-driven ooplasmic segregation in ascidian oocytes		59
Cancelled		60

Case, Lindsay Stoichiometry controls activity of phase separated clusters of actin signaling proteins	61
Castaneda, Carlos UBQLN2 liquid-liquid phase separation is modulated by ALS-linked disease mutations in the proline-rich region	62
Cereghetti, Gea Reversible amyloid-like aggregates of the yeast pyruvate kinase Cdc19 structurally closely resemble dysfunctional amyloids but are essential to ensure cell cycle restart after stress	63
Choi, Jeong-Mo Analytical and numerical aspects of the stickers and spacers framework for phase transitions of multivalent intrinsically disordered proteins	64
Cohan, Megan Charge patterning within the C-terminal disordered tail modulates the phase boundaries of FtsZ assembly and regulates cell division in rod-shaped bacteria	65
Correia, John J. Effects of Doxorubicin on the liquid-liquid phase change properties of ELP	66
Cuevas-Velazquez, Cesar Intrinsically disordered domain-based fluorescence sensors reveal novel insights in liquid phase separation of plant stress proteins	67
Currie, Simon Using in vitro reconstitution to understand the formation and function of RNA processing bodies	68
Dosch, Roland Functional conservation of intrinsically disordered proteins without sequence similarity	69
Duro, Norbert Fuzziness regulates the prion-like aggregation of MAVS	70

Emmanouilidis, Leonidas		
Biophysical and structural characterization of FUS liquid droplets		71
Esgleas, Miriam		
Trnp1, a novel intrinsic disordered regions (IDR) nuclear protein involved in nucleoli assembly		72
Ferencz, Csilla Maria		
Liquid-Liquid Phase Separation in Cytosol		73
Frattini, Camilla	Presenter: Frattini, Camilla; Constantinou, Angelos	
A phase separation model for activation of the DNA damage response		74
Fritsch, Anatol		
Temperature gradients characterize, counteract and rescue P granule segregation in <i>C. elegans</i>		75
Gallo, Raffaella		
DYRK3-controlled phase separation of COPII components spatially organizes vesicle coat recycling		76
Garcia-Jove Navarro, Marina		
Building artificial condensates in mammalian cells to study membrane-less organelle formation		77
Hallegger, Martina		
The intrinsically disordered region of TDP-43 is essential for gene regulation		78
Heidenreich, Meta		
Design of phase-separated protein assemblies in living cells		79
Hernandez-Vega, Amayra		
Local nucleation of microtubule bundles through tubulin concentration into a condensed tau phase		80
Hill, Michelle		
RNA motif-guided exosomal microRNA export regulated by lipid raft protein caveolin-1		81

Holehouse, Alex		
The coupling and decoupling between single chain conformation and emergent phase behaviour		82
Hondele, Maria		
A conserved function of DEAD-box ATPases in the formation of membrane-less compartments through the regulation of phase transitions		83
Hong, Kibeom		
A simple, component-tunable protein/peptide system to construct protein liquid condensates driven by induced multivalency		84
Jafarinaia, Hamidreza		
Phase separation of ALS dipeptide repeat proteins		85
Jahnel, Marcus		
Ageing of a prion liquid		86
Jawerth, Louise	Presenter: Jawerth, Louise; Hyman, Anthony	
The time-dependent material properties of protein condensates		87
Jiang, Hao		
Liquid phase separation mediates spatial regulation of gene expression in cancer		88
Jo, Yongsang		
Principles of protein phase separation: Roles of low-complexity sequences in intrinsically disordered proteins		89
Jolmes, Fabian	Presenter: Maria Loidolt-Krüger	
Quantitative Ultra-fast FLIM		90
Kang, Jian		
Interactions of ALS-causing PFN1 mutants with membranes and TDP-43 prion-like domain		91
Knorr, Roland L.		
Interaction between fluid, membrane-less condensates and biomembranes		92

Kosno, Martyna Proximity-based labeling approach in the compositional studies of PML Nuclear Bodies	93
Kozak, Mateusz Phase separation in the endocytic protein network	94
Kroiss, Daniela ATP-hydrolyzing Peptide Coacervates	95
Larson, Adam Inducible liquid droplet formation by HP1a suggests a role for phase separation in genome organization	96
Lee, Hyun O. Synergistic cellular mechanisms prevent the transition of liquid-like RNA-protein complexes into protein aggregates	97
Lee, Younbok C9orf72 poly GA RAN-translated protein plays a key role in amyotrophic lateral sclerosis via aggregation and toxicity	98
Lemetti, Laura Studying phase separated proteins with FRAP	99
Lim, Liang Zhong Pathogenic aggregation of heterogeneous RNA-binding proteins	100
Linsenmeier, Miriam ATP and RNA control the nucleation and growth of phase separated liquid droplets of the processing body protein Dhh1	101
Ma, Weirui TIS11B granules enable transmission of 3'UTR-encoded genetic information to proteins	102
Maharana, Shovamayee RNA tunes the solubility and phase behavior of prion-like RNA-binding proteins	103

Maier, Joachim NMR studies on peptide-protein interactions contributing to phase-separation	104
March, Zachary Profiling diverse Hsp104 homologues reveals natural disaggregases that modulate aberrant phase transitions	105
Mathews, Kaylee L. Characterizing the structure of the YG box oligomer of the splicing-associated SMN	106
McCall, Patrick M. Linking protein sequence to phase equilibria via quantitative phase microscopy	107
Meyer, Heather Investigation of intrinsically disordered domain proteins as possible thermosensors to time flowering in <i>Arabidopsis thaliana</i>	108
Mikhaleva, Sofya A pathway to measure in situ scaling laws inside giant assemblages	109
Presenter: Tan, Piau Siong; Mikhaleva, Sofya	
Milovanovic, Dragomir Synaptic vesicle clusters in nerve terminals: an example of liquid-liquid phase separation	110
MS, Sankaranarayanan Translational regulation through P body phase transitions during early <i>Drosophila</i> development	111
Murthy, Anastasia Fused in Sarcoma phase separation is mediated by non-specific interactions within the low complexity domain and by low complexity/RGG domain interactions	112
Musser, Siegfried M. Investigating molecular crowding using polarization-PALM	113

Nandi, Saroj Modeling the in vivo phase separation of synthetic protein compartments	114
Nguyen, Cristina Kim Xuan Investigation of the disordered regions of the splicing factor SRSF1 in RNA binding and droplet formation	115
Nguyen, Dieu An Intrinsically Disordered Region: The Distinction among CSR-1 Isoforms	116
Onck, Patrick Sol-gel transition in solutions of FG-Nups	117
Orlowski, Marek FKBP39 from <i>Drosophila melanogaster</i> exhibits a specific pattern of nuclear localization	118
Parekh, Sapun Probing the structure of FUS LCD with CARS microspectroscopy	119
Pastre, David A method for probing protein compartmentalization along the microtubule network in cells	120
Patel, Avinash ATP as a Biological Hydrotrope	121
Peran, Ivan Coupling of compaction of an archetypal disordered low-complexity domain and its ability to undergo liquid-liquid phase separation	122
Pessina, Fabio De novo transcription drives phase transition of DDR factors' foci in response to DNA double-strand breaks	123
Pras, Anita Small EDRK-rich factor 2 as potential gatekeeper neutralizer in the aggregation of disease proteins	124

Quoika, Patrick	Presenter: Köfinger, Jürgen	
Thermodynamic and structural properties of dense protein solutions from coarse-grained simulations		125
Raff, Jordan	(Presenters: Raff, Jordan; Caballe, Anna)	
The Centrosome: a solid scaffold or a phase-separated droplet?		126
Rai, Arpan Kumar		
DYRK3 kinase regulates phase transition of membrane-less organelles during mitosis		127
Rayman, Joseph		
Self-multimerization and phase separation of TIA-1 are dynamically regulated by Zn ²⁺		128
